EDUCATION

Bachelor of Science, Computer Science

June 2017 - June 2021

University of New Orleans – New Orleans, Louisiana

WORK EXPERIENCE

The Process

September 2021 - Present

Co-Founder & Full Stack Developer – Web/Mobile Apps

- Organization founded in 09/22 with the goal to share experiences, expand network, build real world solutions, and grow professionally in an Agile environment.
- Currently responsible for the software architecture and full stack development of **Listen**, a solution that consists of a B2B web app for managing and data analysis through dashboards, and a B2C mobile app that uses gamification to collect customer feedback.
- Worked directly with UX on persona, stakeholder mapping, brainwriting, user interviews, product vision, benchmarking, MoSCoW, value proposition, user journey, Lean Canvas, SWOT analysis and wireframe.
- Actively working with UI Designers to build mobile app prototypes for solution **Listen**.

OneTrust, Atlanta

July 2021 – June 2022

Associate Customer Engineer – Data Governance & Discovery

- Key contact in driving and building the relationship, implementing the solution, and managing the expectations of the customer regarding OneTrust's Data Discovery product.
- Important bridge between OneTrust and the customer, helping the business grow by identifying product enhancements and relaying them between the customer and OneTrust Product teams.
- Responsibilities included overseeing the technical implementation for 30+ accounts from start to finish.

Twitter, Atlanta

May 2020 – December 2020

Site Operations Technician

- Built a quick floor map web application that mapped out data center rooms and server racks.
- Their original web map application had issues with slow loading, and the challenge was to validate if a quicker solution could be built with a different tech stack. Task was accomplished with success.
- Solved over 25 tickets related to server repairs, tickets request included diagnosing, troubleshooting, and replacing hardware in server failures related to DIMMs, HDDs and SSDs issues.

PROJECTS

Restaurant Booking System (Full Stack - MERN Stack)

[LIVE Project](#) | [GitHub](#)

- Web app that users can signup/signin and book tables for a restaurant. The goal of this project was to design, develop and deploy in the Cloud a Full Stack Web App using **Figma**, the **MERN** stack and **AWS** services. **MVCS** pattern was used in the backend of this application.
